

New: The geography of future water challenges online in infographics!

February 26th, 2019

Water is a precious resource, but it can also be a threat. We can have too much of it, or too little, or it may be too dirty to use. These issues affect the lives of many millions of people today. Water-related risks are increasing in many regions across the globe. Main drivers are rapid population growth and climate change.

The Netherlands Environmental Assessment Agency made a web-based storyboard to increase the awareness of the urgent need to tackle the challenges ahead.
